

Model AE-5000 with Shingling Conveyor

Carruthers AE 5000 with Shingling Conveyor

Carruthers continues to extend its 'Pathfinder' conveyor product offerings by recently adding a new style 'shingling takeaway conveyor', smartly interfaced to the Carruthers AE Model 5000 Slicer / Dicer. Our Shingling conveyor will accept sliced product from the Spiral Slicing knife at very close proximity to the knife, allowing for precise control of slices. Conveyor speed can be adjusted to control shingling density. The Shingling conveyor can be interfaced to either of the Carruthers Auto-Slicer 1-dimensional or 2-dimensional slicer designs, providing greater flexibility to the customer by having 1 machine do slicing and dicing applications that used to require 2 separate machines.

Additionally, we have designed a PLC controlled option whereas the customer can select # of slices per group, and distance between groupings as well as cut size and shingling density directly from a easy to use touchscreen user interface.

Our customers have found this design to be ideal for slicing cooked chicken for transfer to trays for fajitas or bentos, or for bacon slices or fresh beef steaks. Contact us today for a free video.
